# CS 3360 Homework #5
Cole Hurst

Summary

In this project I was tasked with creating a simulator that, within 2 separate scenarios, simulated processes passing through 1 or 2 CPU's utilizing the FCFS methodology. Utilizing a lot of the code I used for homework 3 part 2 (with adjustments here and there) I come to my best conclusion on the results of the simulators processes.

Results

CPU utilization

Throughput

Average Number of Processes
